

Topo cloning protocol

- 10µl of Pcr product+0,5µl of Taq-Polymerase+0,5µl Dntps
- incubate 20min at 72°C
- take 3µl of previous mix+2µl salt solution+0,5µl topovector deluted 1:1+4,5µl H₂O
- incubate 30min at room temperatur
- transform in E.coli
- plate on amp-plates+60µl 20% X-Gal
- positive colonys are colorless
